

A quiet place to write.

From your first line to the finished PDF.

1 Write with focus

A native workspace for LaTeX on macOS. Keep your source and PDF side by side, with room to think and space to create.

1.1 Clarity in every line

Syntax highlighting brings structure into view. Command completion keeps your next idea within reach.

2 See your words take shape

Compile with XeLaTeX, pdfLaTeX or LuaLaTeX. Review the PDF inside your workspace. Follow errors back to the source.

2.1 Stay connected to the page

Command-click to move between source and PDF. Navigate without losing where your thought began.

3 Keep the whole project in view

Move through chapters, labels and files from one sidebar. Open subfiles in tabs and keep your main document close.

3.1 Make room for longer work

From a short article to a multi-file project, keep your writing organized and your attention on the ideas.
